Project No. PRJ2021-001195-(5) / Trails at Lyons Canyon
Planner: Erica G. Aguirre, AICP
Applicant: NUWI-Lyons Canyon, LLC
Address: South of Sagecrest Circle, west of The Old Road, and north of Calgrove Boulevard (APNs.: 2826-022-026, -027, -035; 2826-023-014; 2826-041-039)
Santa Clarita Valley Planning Area

ADDITIONAL COMMENTS RECEIVED

The following memo includes various additional comments received both in support of and in opposition to the Trails at Lyons Canyon, including the applicant's responses to comments received. These comments were received after the noon deadline on July 29, 2025, during, or after the Wednesday, July 30, 2025, Regional Planning Commission Hearing held at 9 am. These documents are nonetheless part of the project's administrative and public record and are therefore being made publicly available.

Final Environmental Impact Report

Trails at Lyons Canyon Project Responses to Additional Comments Received

STATE CLEARINGHOUSE NO. 2022060346

JULY 2025

Prepared for:

LOS ANGELES COUNTY DEPARTMENT OF REGIONAL PLANNING

LA COUNTY PLANNING

320 West Temple Street
Los Angeles, California 90012

Prepared by:

DUDEK

225 South Lake Avenue, Suite 225-M210
Pasadena, California 91101

1 Introduction

The Los Angeles County Department of Regional Planning (County) has received additional public comments letters after close of the public review period for the Draft Environmental Impact Report (EIR) and prior to the Regional Planning Commission meeting on July 30, 2025, that raise environmental issues pertinent to the analysis presented in the Draft EIR and/or Final EIR for the Trails at Lyons Canyon Project (Project). The County received a total of 32 comment letters from various organizations, individuals, and one agency.

Table 1 lists the comment letters received, including the name and/or organization and the date of the correspondence. The majority of comments received have been previously responded to in Chapter 2, Response to Comments, of the Final EIR and/or were adequately addressed in the Draft EIR. Comments that were not specifically addressed therein (or where further clarification has been provided) are highlighted and responded to in Section 2, Comments and Responses, of this document. The comment letters addressed in Section 2 of this document are noted in Table 1, below.

Table 1. List of Commenters

Response Provided in Section 2?	Name	Type	Date Received

Notes:

1. This comment letter includes a petition opposing the Project with 559 signatures.

As presented in Section 2, none of the comments received identified deficiencies in the Draft or Final EIR analyses that would require recirculation of the EIR pursuant to CEQA Guidelines Section 15088.5.

State CEQA Guidelines Section 15088.5, Recirculation of an EIR Prior to Certification, is presented below for reference:

(a) A lead agency is required to recirculate an EIR when significant new information is added to the EIR after public notice is given of the availability of the draft EIR for public review under Section 15087 but before certification. As used in this section, the term "information" can include changes in the project or environmental setting as well as additional data or other information. New information added to an EIR is not "significant" unless the EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect (including a feasible project alternative) that the project's proponents have declined to implement. "Significant new information" requiring recirculation include, for example, a disclosure showing that:

(1) A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.

(2) A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.

(3) A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project's proponents decline to adopt it.

(4) The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded. (*Mountain Lion Coalition v. Fish and Game Com.* (1989) 214 Cal.App.3d 1043)

Although no comments have been raised that would require revisions to the Final EIR, these comments are available to the Regional Planning Commission for their review and consideration as part of their deliberations on the Project's environmental documentation.

2 Comments and Responses

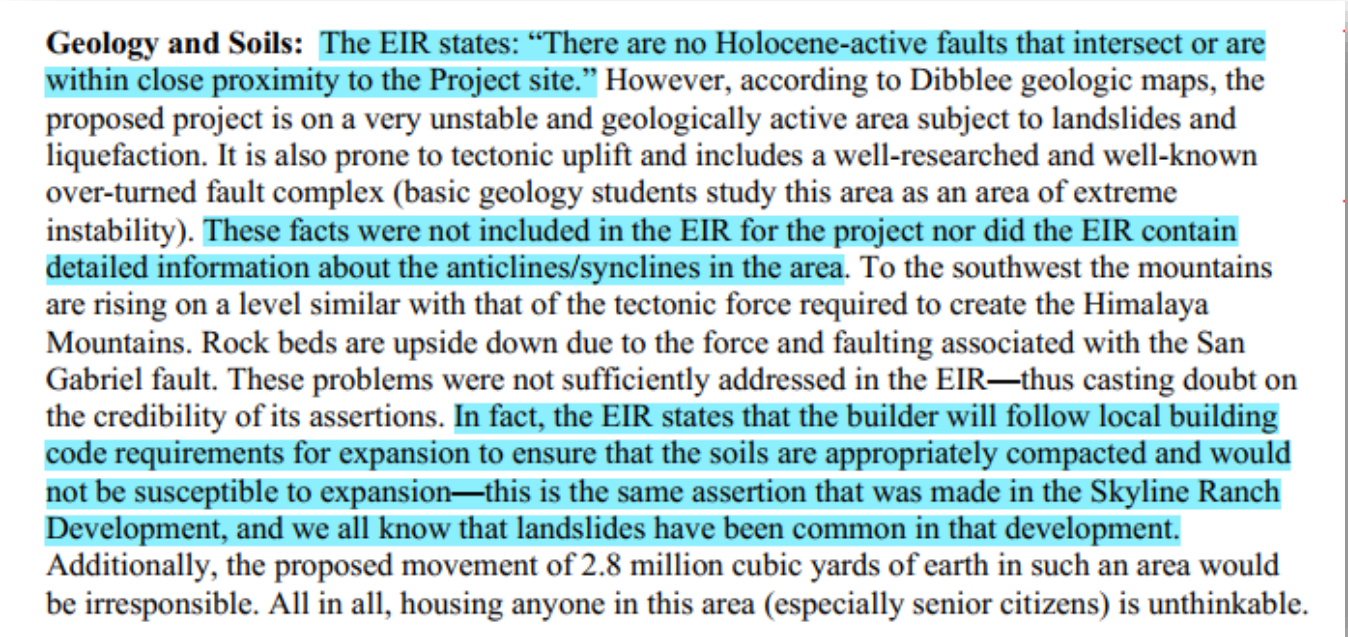

This section presents responses to some additional comments received on the Final EIR.

Response to Comment Letter 1

Sierra Club, Santa Clarita Valley Group
Katherine Solomon, Conservation Chair and Sandra Cattell, Chair
July 20, 2025

The majority of comments in this letter were responded to in Chapter 2, Response to Comments, of the Final EIR and/or were adequately addressed in the Draft EIR. Comments that were not specifically addressed therein or garner further clarification are highlighted in blue and responded to below. These comments and responses do not constitute significant new information requiring recirculation of the EIR as defined in State CEQA Guidelines Section 15088.5.

Comment 1-1

Geology and Soils: The EIR states: "There are no Holocene-active faults that intersect or are within close proximity to the Project site." However, according to Dibblee geologic maps, the proposed project is on a very unstable and geologically active area subject to landslides and liquefaction. It is also prone to tectonic uplift and includes a well-researched and well-known over-turned fault complex (basic geology students study this area as an area of extreme instability). These facts were not included in the EIR for the project nor did the EIR contain detailed information about the anticlines/synclines in the area. To the southwest the mountains are rising on a level similar with that of the tectonic force required to create the Himalaya Mountains. Rock beds are upside down due to the force and faulting associated with the San Gabriel fault. These problems were not sufficiently addressed in the EIR—thus casting doubt on the credibility of its assertions. In fact, the EIR states that the builder will follow local building code requirements for expansion to ensure that the soils are appropriately compacted and would not be susceptible to expansion—this is the same assertion that was made in the Skyline Ranch Development, and we all know that landslides have been common in that development. Additionally, the proposed movement of 2.8 million cubic yards of earth in such an area would be irresponsible. All in all, housing anyone in this area (especially senior citizens) is unthinkable.

Response to Comment 1-1

This comment regarding Holocene-active faults is similar to Comment O3-9 (included within Chapter 2, Response to Comments, of the Final EIR). As such, please refer to Response to Comment O3-9 (beginning on Final EIR page 2-204). Regarding Holocene-active faults, the data provided in the Draft EIR regarding the proximity to Holocene-active faults (Draft EIR page 4.7-3) was provided primarily to determine the potential for surface fault rupture hazards and not the stability of soil and bedrock units nor potential for landslide and liquefaction hazards. The potential for the Project to be located on an unstable geologic or soil unit or that would become unstable as a result of the Project is addressed in the impact analysis for Threshold 4.7c (Draft EIR page 4.7-18). The potential impacts related to seismically induced landslides is addressed in Threshold 4.4a(iv) (Draft EIR page 4.6-15) and Threshold 4.7a(iii) for liquefaction hazards (Draft EIR page 4.6-14). As noted in the Draft EIR, the Project site is located in region that has been shaped by north-south compressional forces (i.e., tectonic) and the geologic units that are present at the site (Draft EIR pages 4.7-1 and 4.7-2) are based on previous geotechnical investigations, geologic

maps prepared by California Geologic Survey and the Dibblee Foundation, and borings and test pits located on the Project site. The site-specific Geotechnical Report that was conducted for the proposed Project (provided as Appendix E-1 of the Draft EIR) was prepared and signed by a California licensed Geotechnical Engineer and Engineering Geologist in accordance with current industry standard practices and consistent with building code requirements.

This comment regarding anticlines and synclines is similar to Comment O3-10 (included within Chapter 2, Response to Comments, of the Final EIR). As such, please refer to Response to Comment O3-10 (beginning on Final EIR page 2-204). The presence or absence of anticlines and synclines was accounted for in the analysis of geologic conditions, specifically as it relates to the stability of cut slopes and the intersection of bedding planes, as discussed beginning on page 4.7-15 of the Draft EIR. The Geotechnical Report included a detailed site-specific slope stability analysis (included as Appendix D of the report provided as Appendix E-1 of the Draft EIR) consistent with building code requirements.

The reference to the Skyline Ranch Development, located more than 7 miles from the Project site and across the valley, has little bearing on the proposed Project as conditions can change substantially over short distances due to the complexity of geologic structure. For example, according to California Geological Survey geologic mapping, the Skyline Ranch Development area is underlain by Pleistocene and Pliocene sandstone, shale and gravel deposits (QPc) and Miocene nonmarine sandstone and shale deposits (Mc), which are completely different bedrock units than at the Project site. The analysis of the potential hazards of expansive soils was addressed in Threshold 4.7d (Draft EIR page 4.7-19), which relates to the potential for volumetric changes to occur due to cyclical changes in moisture content, which is unrelated to landslides. Adherence to building code requirements would ensure that placement of all fill materials meet minimum threshold standards for expansive properties to minimize adverse effects.

Comment 1-2

Wildfire: Unbelievably, the EIR does not strengthen the fire protections that were lacking in the DEIR. For example, the EIR tsates that fire education will be the responsibility of an HOA—what if the HOA does not follow through? It is disturbing to see the EIR take the risk of fire so lightly. Most importantly, any mitigations the EIR mentions will not solve the problem for those in danger when another fire roars through this area—which even the EIR points out will happen again. The presence of a fire station on the site and HOA trainings on Fire Danger while well-intentioned, will have little impact when another fire roars through this area.

Response to Comment 1-2

Please refer to Topical Reponse-1 in Chapter 2, Response to Comments, of the Final EIR for a detailed response related to fire protection and safety (beginning on Final EIR page 2-6). In response to comments received during the Draft EIR public review period, MM-4.20-1, Wildfire Education Program, was revised to include additional clarifications and requirements related to senior housing. However, the Project is not "lacking" any necessary components related to fire protection and safety.

Regarding implementation and oversight of required mitigation measures, it is speculative to assume the Homeowners' Association will not educate its residents of wildfire risk. Nonetheless, Public Resources Code Section 21081.6(a)(1) requires a Lead Agency that approves or carries out a project, where an environmental impact report has identified significant environmental effects, to adopt a "reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment." A Mitigation Monitoring and Reporting Program (MMRP) has thus been prepared for the Project, as set forth in Chapter 4 of the Final EIR (beginning on Final EIR page 4-1). The County is the Lead Agency that must adopt the MMRP for future development under the Project. The various Homeowners' Association actions required pursuant to MM-4.20-1 will be monitored by the County Fire Department or the County Department of Parks and Recreation in accordance with the requirements outlined the MMRP to ensure implementation. The MMRP will be kept on file with the Los Angeles County Department of Regional Planning, 320 West Temple Street, 13th Floor, Los Angeles, California, 90012.

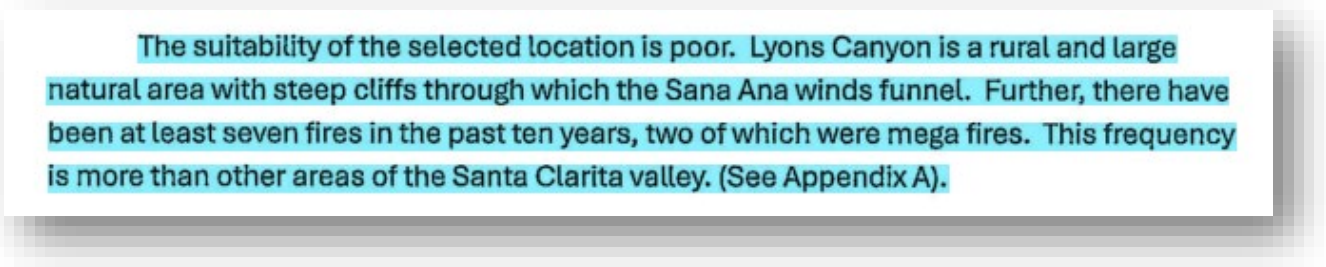

The analysis presented in the Draft EIR, Final EIR, and associated wildfire-related technical reports detail that impacts regarding wildfires would result in less than significant impacts with mitigation. These analyses have provided the substantial evidence to determine that wildfire impacts regarding the possibility of future wildfires through the area would be mitigated to a degree of less than significant with applicable mitigation requirements.

Response to Comment Letter 2

Dr. Susan Stone
July 27, 2025

The majority of the comments in this letter were responded to in Chapter 2, Response to Comments, of the Final EIR and/or were adequately addressed in the Draft EIR. Comments that were not specifically addressed therein or where further clarification has been provided are highlighted in blue and responded to below. These comments and responses do not constitute significant new information requiring recirculation of the EIR as defined in State CEQA Guidelines Section 15088.5.

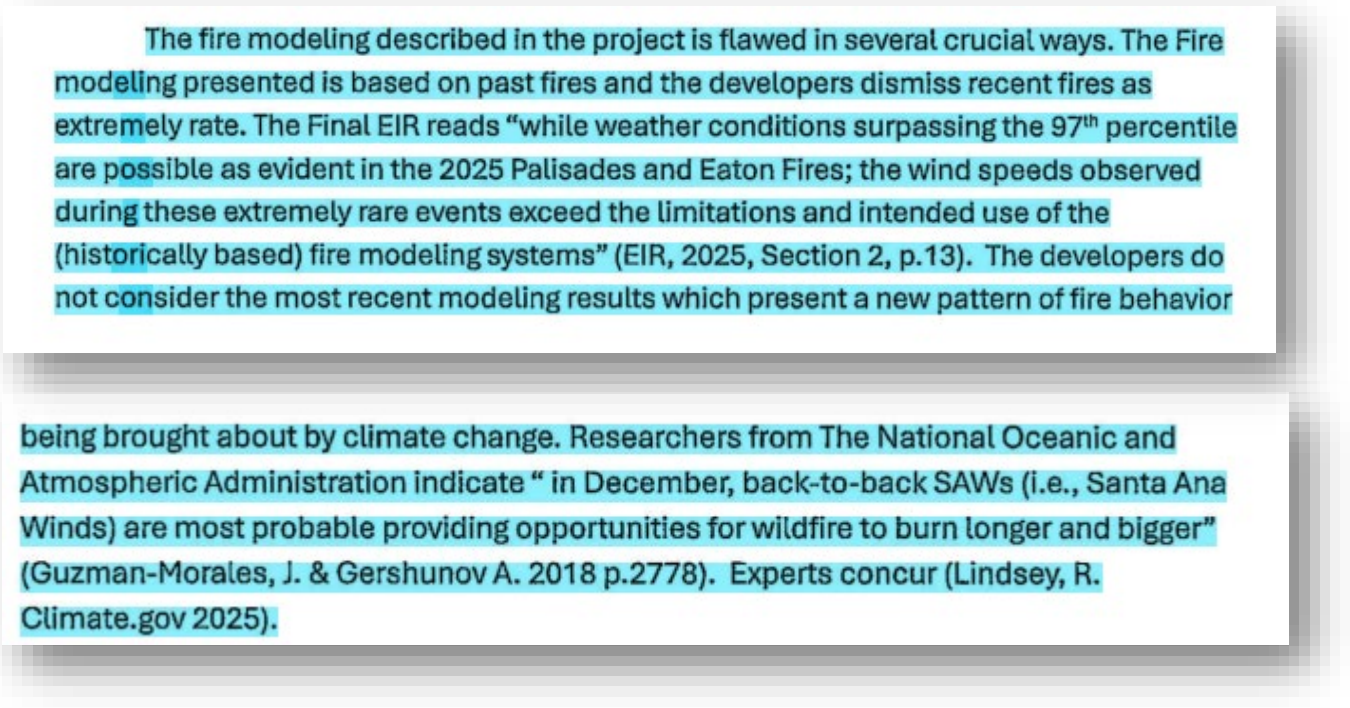

Comment 2-1

The suitability of the selected location is poor. Lyons Canyon is a rural and large natural area with steep cliffs through which the Sana Ana winds funnel. Further, there have been at least seven fires in the past ten years, two of which were mega fires. This frequency is more than other areas of the Santa Clarita valley. (See Appendix A).

Response to Comment 2-1

As discussed in further detail in Topical Response-1 in Chapter 2, Response to Comments of the Final EIR, the Project area has been subject to recent wildfire activity. However, all of the Santa Clarita Valley and the greater Los Angeles Basin have been subject to frequent and/or repeated fires and/or fire risk prior to being developed. The key is that newer communities constructed in accordance with modern fire code and building code, such as the Project (and existing communities such as Stevenson Ranch to the north), perform very well in fire-prone environments.

Comment 2-2

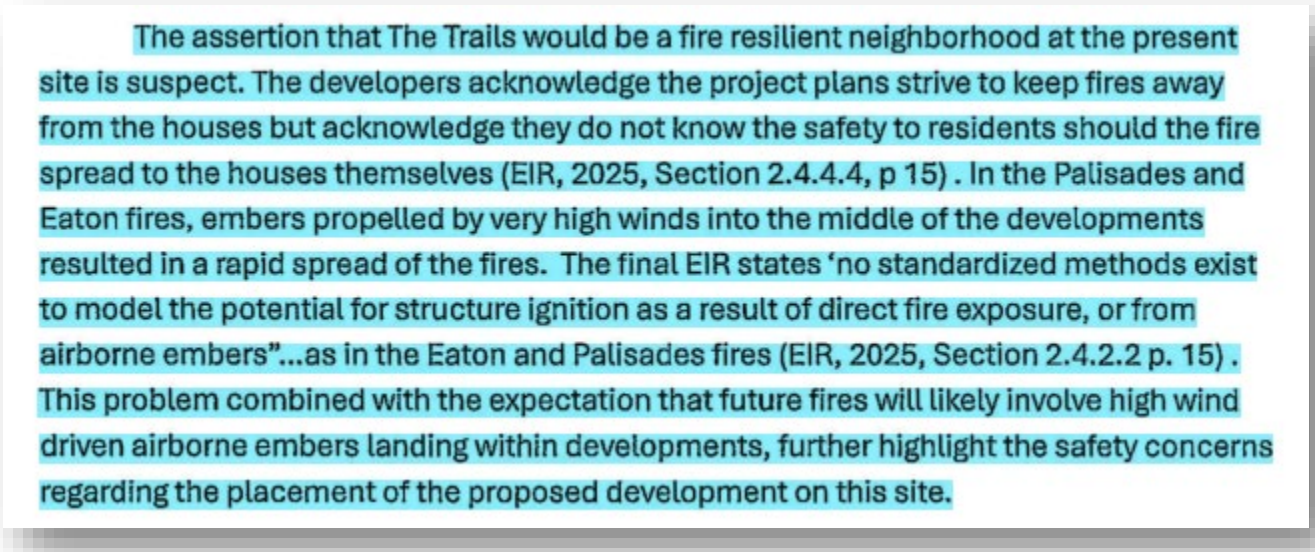

The fire modeling described in the project is flawed in several crucial ways. The Fire modeling presented is based on past fires and the developers dismiss recent fires as extremely rate. The Final EIR reads "while weather conditions surpassing the 97th percentile are possible as evident in the 2025 Palisades and Eaton Fires; the wind speeds observed during these extremely rare events exceed the limitations and intended use of the (historically based) fire modeling systems" (EIR, 2025, Section 2, p.13). The developers do not consider the most recent modeling results which present a new pattern of fire behavior being brought about by climate change. Researchers from The National Oceanic and Atmospheric Administration indicate " in December, back-to-back SAWs (i.e., Santa Ana Winds) are most probable providing opportunities for wildfire to burn longer and bigger" (Guzman-Morales, J. & Gershunov A. 2018 p.2778). Experts concur (Lindsey, R. Climate.gov 2025).

Response to Comment 2-2

This comment related fire modeling data is responded to in further detail in Topical Response-1 in Chapter 2, Response to Comments of the Final EIR. As discussed in Section 2.4.2, Project Fire Behavior Modeling and Relationship to 2025 Los Angeles Fires, of the Final EIR, the Eaton and Palisades Fires (representing wind speeds of 99th to 100th percentile) were exceptionally rare events. Since 2005, wind speeds exceeding 80 mph have only been recorded six times in the vicinity of those fires. Moreover, the use of 97th percentile weather conditions in fire modeling is an industry standard meant to represent extreme, but statistically relevant, weather scenarios. The 97th percentile wind inputs predict an extremely aggressive fire with wind speeds that are sustained (as opposed to gusts). At the Project site specifically, only one wind event since 2005 has exceeded 60 mph, with none surpassing 70 mph. Additionally, flame lengths in wildland fuels tend to reach their maximum height when winds are between 50 to 60 mph. Thus, the Draft EIR's reliance on 97th percentile weather data is sufficient and appropriate for wildfire hazard assessment and mitigation planning. While fires may be more likely during back-to-back Santa Ana Wind events, the Project, like every new master-planned community, is well-prepared for the types of wildfires that could occur in the adjacent fuel sources.

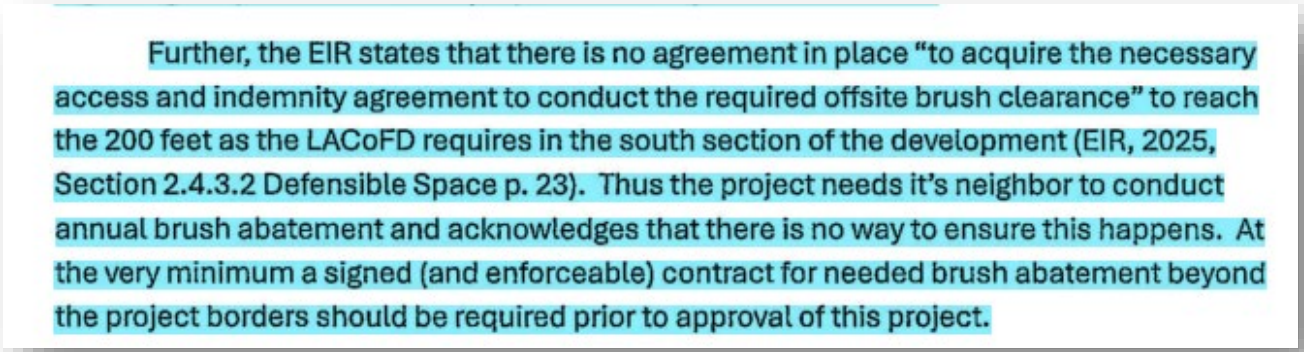

Comment 2-3

The assertion that The Trails would be a fire resilient neighborhood at the present site is suspect. The developers acknowledge the project plans strive to keep fires away from the houses but acknowledge they do not know the safety to residents should the fire spread to the houses themselves (EIR, 2025, Section 2.4.4.4, p 15) . In the Palisades and Eaton fires, embers propelled by very high winds into the middle of the developments resulted in a rapid spread of the fires. The final EIR states 'no standardized methods exist to model the potential for structure ignition as a result of direct fire exposure, or from airborne embers"...as in the Eaton and Palisades fires (EIR, 2025, Section 2.4.2.2 p. 15) . This problem combined with the expectation that future fires will likely involve high wind driven airborne embers landing within developments, further highlight the safety concerns regarding the placement of the proposed development on this site.

Response to Comment 2-3

As discussed in further detail in Topical Response-1 in Chapter 2, Response to Comments of the Final EIR, the Project should not be compared to the older communities (such as those affected by the Eaton and Palisades Fires) that were not in compliance with more recent building and fire codes. Communities with the types of ignition-resistant building construction, sprinkler systems, landscaping restrictions limiting combustible materials, and fuel modification zones applicable to the Project do not typically experience house-to-house ignitions. There are no documented instances of this occurring in more modern, code-compliant communities. The State Fire Marshal's data indicates how well these types of communities perform with no or very minimal structural damage.

Comment 2-4

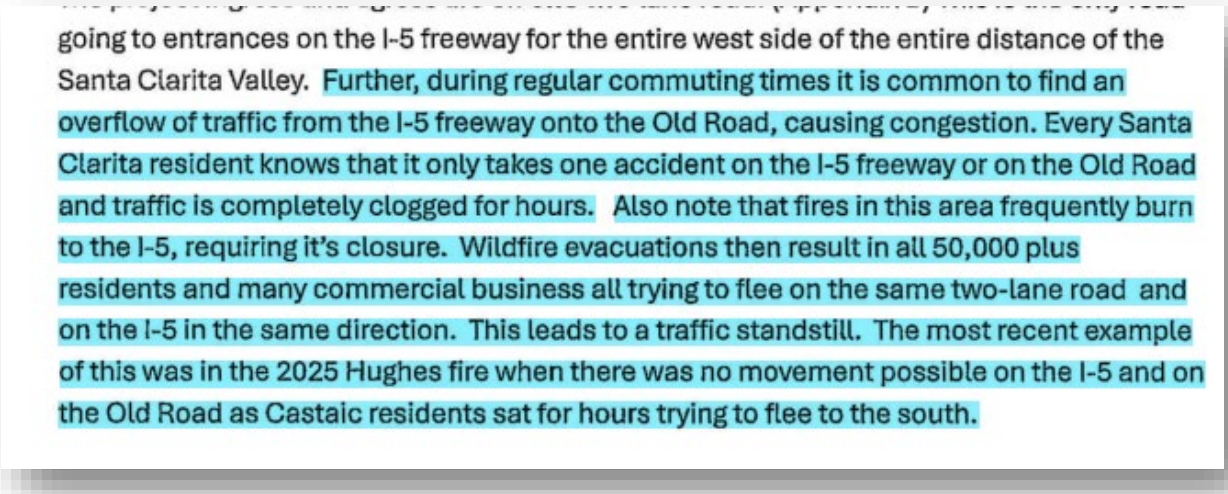

Further, the EIR states that there is no agreement in place "to acquire the necessary access and indemnity agreement to conduct the required offsite brush clearance" to reach the 200 feet as the LACoFD requires in the south section of the development (EIR, 2025, Section 2.4.3.2 Defensible Space p. 23). Thus the project needs it's neighbor to conduct annual brush abatement and acknowledges that there is no way to ensure this happens. At the very minimum a signed (and enforceable) contract for needed brush abatement beyond the project borders should be required prior to approval of this project.

Response to Comment 2-4

This comment regarding off-site brush management is responded to in further detail in Topical Response-1 in Chapter 2, Response to Comments of the Final EIR. As discussed in Section 2.4.3.2, Fire Safety Requirements, of

the Final EIR under the subheading "Defensible Space," a representative from the City of Santa Clarita corresponded with the Project Applicant via email and confirmed that they are amenable to working with the Applicant to facilitate acquisition of the necessary access and indemnity agreements to conduct the required off-site brush clearance (McKenna, pers. comm. 2024). The City indicated they are not opposed to allowing access for brush clearance. However, without confirmation of an agreement with the City for off-site brush clearance, MM-4.20-2, Alternative Materials and Methods, is included to ensure that additional fire protection measures are implemented to effectuate the same level of protection as a 200-foot on-site fuel modification zone. MM 4.20-2 will require enhanced construction features, such as a 6-foot, heat-deflecting wall between the 16 on-site structures in southern Project site and adjacent open space. Ultimately it is anticipated that those 16 residences would be doubly protected by both enhanced building materials and brush clearance (once final approval from the City is granted) (Final EIR pages 2023 and 2-24)

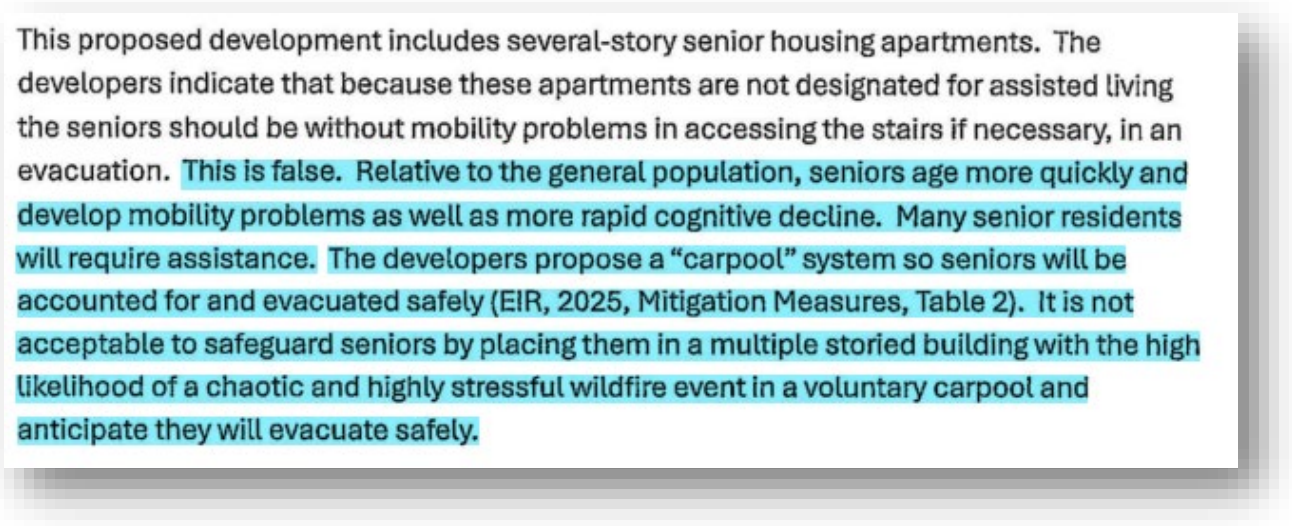

Comment 2-5

going to entrances on the I-5 freeway for the entire west side of the entire distance of the Santa Clarita Valley. Further, during regular commuting times it is common to find an overflow of traffic from the I-5 freeway onto the Old Road, causing congestion. Every Santa Clarita resident knows that it only takes one accident on the I-5 freeway or on the Old Road and traffic is completely clogged for hours. Also note that fires in this area frequently burn to the I-5, requiring it's closure. Wildfire evacuations then result in all 50,000 plus residents and many commercial business all trying to flee on the same two-lane road and on the I-5 in the same direction. This leads to a traffic standstill. The most recent example of this was in the 2025 Hughes fire when there was no movement possible on the I-5 and on the Old Road as Castaic residents sat for hours trying to flee to the south.

Response to Comment 2-5

A detailed response regarding Project's Wildfire Evacuation Plan and evacuation modeling is provided in Topical Response-1 in Chapter 2, Response to Comments of the Final EIR. Additionally, the Office of Emergency Services together with fire and law enforcement officials, have evacuation plans in place that are enacted based on the given scenario. Safety, not time, is the top priority when conducting evacuations, and increases in evacuation time do not necessarily generate a greater safety risk. Emergency responders move people at highest risk/exposure while other are stopped to open up roads. In short, a variety of factors may make a longer evacuation safe. That is why a multifaceted approach to fire-resilient development is required and is incorporated into the Project (Final EIR page 2-38).

Comment 2-6

This proposed development includes several-story senior housing apartments. The developers indicate that because these apartments are not designated for assisted living the seniors should be without mobility problems in accessing the stairs if necessary, in an evacuation. This is false. Relative to the general population, seniors age more quickly and develop mobility problems as well as more rapid cognitive decline. Many senior residents will require assistance. The developers propose a "carpool" system so seniors will be accounted for and evacuated safely (EIR, 2025, Mitigation Measures, Table 2). It is not acceptable to safeguard seniors by placing them in a multiple storied building with the high likelihood of a chaotic and highly stressful wildfire event in a voluntary carpool and anticipate they will evacuate safely.

Response to Comment 2-6

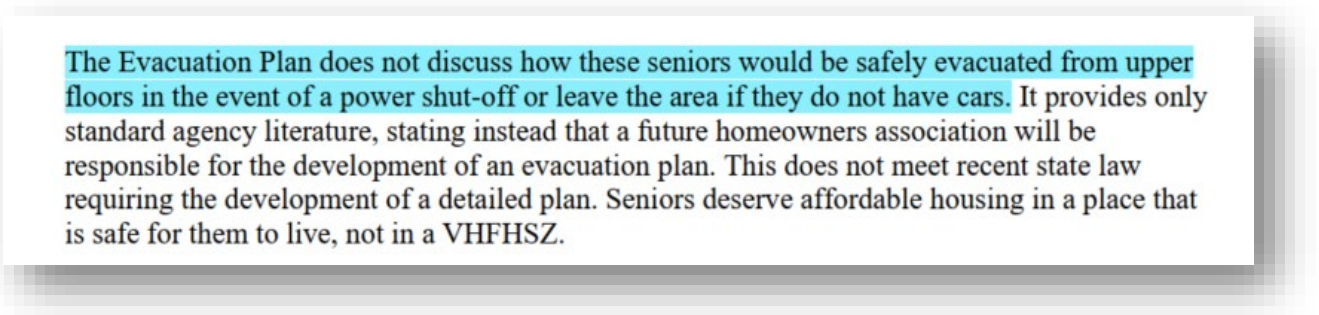

The Final EIR merely clarifies that the proposed low-income senior housing is not a facility that specializes in assisted living for seniors or convalescent care. Furthermore, like any part of the population that needs assistance, there are resources to assist in the event of an emergency. Mitigation Measure 4.20-1 requires that at least once a year, information shall be provided to the residents in an email and mailer on how to notify the County Office of Emergency Management and Health and Human Services of special needs and/or required accommodations (Accessible Alert LA County, CERT programs, or other) for transportation or other special services. The proposed Project includes two stairs that are designed in accordance with the applicable Building Code requirements to allow multiple points of egress in the event of an emergency, as well as an elevator. The senior living building will be fire-rated to withstand fire exposure for 60-minutes and will include a fire sprinkler system, as stated in detail in Topical Response-1 of Chapter 2, Response to Comments of the Final EIR. Finally, in accordance with MM-4.20-1, Wildfire Education Program, the Fire Safety Coordinator will be responsible for creating the senior housing carpool program and will be available to assist with procedures for evacuation and transportation during an emergency evacuation.

Response to Comment Letter 3

Sierra Club, Wildland Urban Wildlife Committee
July 27, 2025

The majority of comments in this letter were responded to in Chapter 2, Response to Comments, of the Final EIR and/or were adequately addressed in the Draft EIR. Comments that were not specifically addressed therein are highlighted in blue and responded to below.

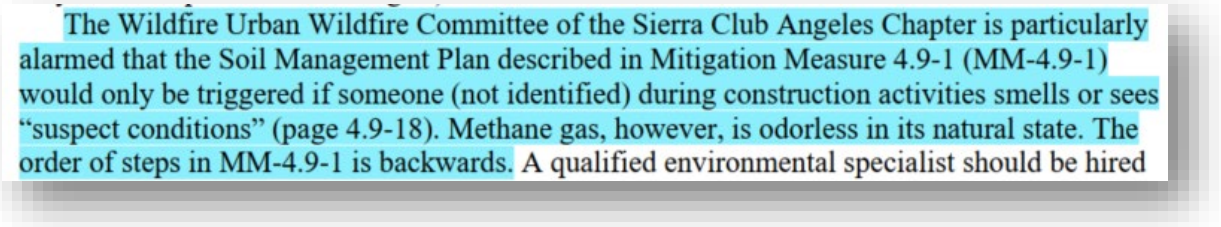

Comment 3-1

The Evacuation Plan does not discuss how these seniors would be safely evacuated from upper floors in the event of a power shut-off or leave the area if they do not have cars. It provides only standard agency literature, stating instead that a future homeowners association will be responsible for the development of an evacuation plan. This does not meet recent state law requiring the development of a detailed plan. Seniors deserve affordable housing in a place that is safe for them to live, not in a VHFHSZ.

Response to Comment 3-1

The Final EIR merely clarifies that the proposed low-income senior housing is not a facility that specializes in assisted living for seniors or convalescent care. Furthermore, like any part of the population that needs assistance, there are resources to assist in the event of an emergency. Mitigation Measure 4.20-1 requires that at least once a year, information shall be provided to the residents in an email and mailer on how to notify the County Office of Emergency Management and Health and Human Services of special needs and/or required accommodations (Accessible Alert LA County, CERT programs, or other) for transportation or other special services. The proposed Project includes two stairs that are designed in accordance with the applicable Building Code requirements to allow multiple points of egress in the event of an emergency, as well as an elevator. The senior living building will be fire-rated to withstand fire exposure for 60-minutes and will include a fire sprinkler system, as stated in detail in Topical Response-1 of Chapter 2, Response to Comments of the Final EIR. Finally, in accordance with MM-4.20-1, Wildfire Education Program, the Fire Safety Coordinator will be responsible for creating the senior housing carpool program and will be available to assist with procedures for evacuation and transportation during an emergency evacuation.

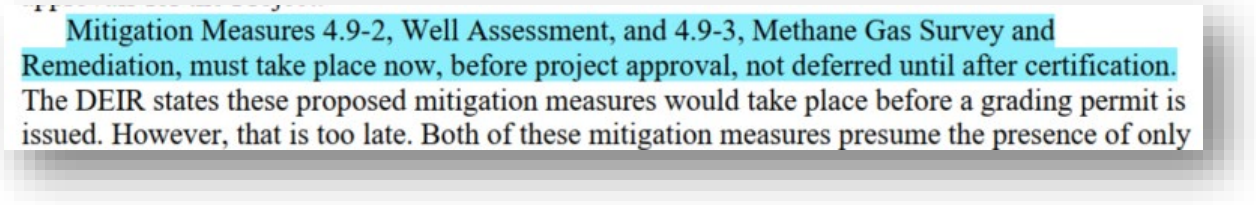

Comment 3-2

The Wildfire Urban Wildfire Committee of the Sierra Club Angeles Chapter is particularly alarmed that the Soil Management Plan described in Mitigation Measure 4.9-1 (MM-4.9-1) would only be triggered if someone (not identified) during construction activities smells or sees "suspect conditions" (page 4.9-18). Methane gas, however, is odorless in its natural state. The order of steps in MM-4.9-1 is backwards. A qualified environmental specialist should be hired

Response to Comment 3-2

This comment does not accurately reflect the requirements of the mitigation program. As required in MM-4.9-3 included in Chapter 4, Mitigation Monitoring and Reporting Program of the Final EIR, the Applicant must conduct methane gas testing for the presence of methane gas emissions within 300 feet of the plugged well, in accordance with CalGEM and Public Works standards for methane gas assessment guidelines. In the event that the soil gas investigation indicates methane levels that exceed 5,000 parts per million by volume, the Project must include installation of a gas protection system for residences within 300 feet of the plugged oil well, to be developed in compliance with the Public Works Methane Hazard Mitigation Policy. The necessary approvals shall be obtained from CalGEM to ensure that methane has been addressed through Project design plans for a gas protection system prior to commencement of construction of the Project, and that all remedial and grading activity recommendations have been implemented to the satisfaction of CalGEM and the Public Works Building Official. As such, the presence or absence of methane gas would not be subject to sight or smells, and would be addressed separately from the requirements of MM-4.9-1.

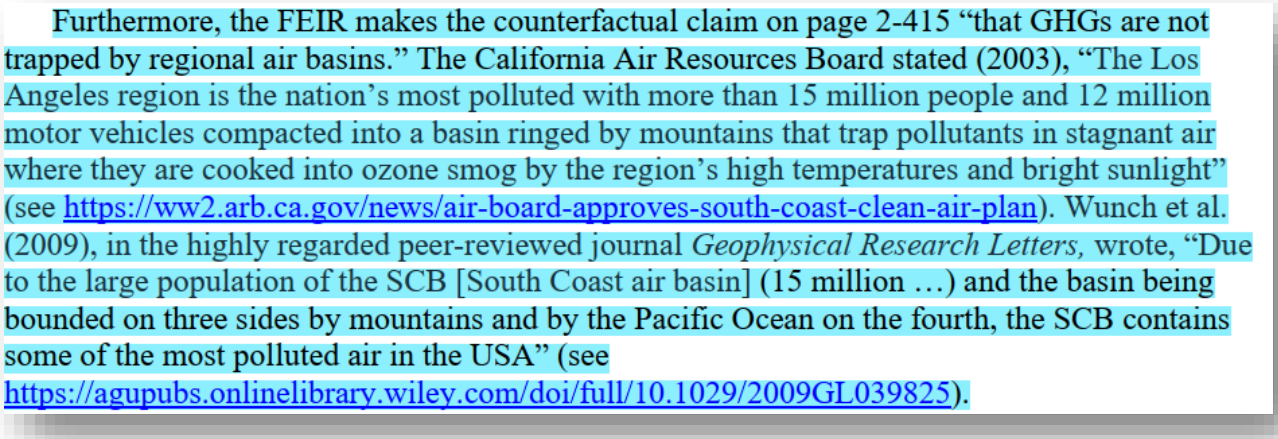

Comment 3-3

Mitigation Measures 4.9-2, Well Assessment, and 4.9-3, Methane Gas Survey and Remediation, must take place now, before project approval, not deferred until after certification. The DEIR states these proposed mitigation measures would take place before a grading permit is issued. However, that is too late. Both of these mitigation measures presume the presence of only

Response to Comment 3-3

As required by CEQA, MM-4.9-2 and MM-4.9-3 include clear performance standards to ensure that any presence of methane will be appropriately assessed and addressed prior to the issuance of a grading permit. As clarified through *Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884, a lead agency can permissibly articulate specific performance criteria in a mitigation measure and commit to a future study as long as there are details included regarding how the mitigation will be achieved. The Draft EIR has acknowledged the potential methane impact, required implementation of feasible mitigation with clear performance standard requirements, to be satisfied prior to Project implementation.

Comment 3-4

Furthermore, the FEIR makes the counterfactual claim on page 2-415 "that GHGs are not trapped by regional air basins." The California Air Resources Board stated (2003), "The Los Angeles region is the nation's most polluted with more than 15 million people and 12 million motor vehicles compacted into a basin ringed by mountains that trap pollutants in stagnant air where they are cooked into ozone smog by the region's high temperatures and bright sunlight" (see https://ww2.arb.ca.gov/news/air-board-approves-south-coast-clean-air-plan). Wunch et al. (2009), in the highly regarded peer-reviewed journal *Geophysical Research Letters,* wrote, "Due to the large population of the SCB [South Coast air basin] (15 million …) and the basin being bounded on three sides by mountains and by the Pacific Ocean on the fourth, the SCB contains some of the most polluted air in the USA" (see https://agupubs.onlinelibrary.wiley.com/doi/full/10.1029/2009GL039825).

Response to Comment 3-4

The comment conflates criteria air pollutants and greenhouse gas (GHG emissions). This comment has been addressed in Response to Comment O27-9. The source that the commenter provided is regarding air/criteria pollutants (including ozone), which are analyzed in the Draft EIR and are determined to be less than significant with mitigation.

Response to Comment Letter 4

Santa Clarita Organization for Planning and the Environment (SCOPE)
July 28, 2025

The majority of comments in this letter were responded to in Chapter 2, Response to Comments, of the Final EIR and/or were adequately addressed in the Draft EIR. Comments that were not specifically addressed therein are highlighted in blue and responded to below.

Comment 4-1

Inadequate Evacuation Planning by Los Angeles County

Assembly Bill 747 which passed in 2019, requiring California cities and counties to analyze whether their roads could support a quick evacuation during emergencies such as fires, floods and tsunamis. Yet, to date, fire safety advocates say L.A. County's evacuation analysis fails to meet the law's requirements. The Governor's Office of Land Use and Climate Innovation, which provides guidance on state planning laws, recommended that local governments use traffic software to simulate different evacuations to estimate how long they might take. Instead, the county grabbed a list of all roads in unincorporated areas within its borders and listed them as "evacuation routes" so long as they were paved, public and not a dead end. [1]

LA County Planning is still in the process of developing the Community Wildfire Protection (CWP) Ordinance. The CWP Ordinance was formerly named, and referenced in the General Plan, as the Reduce Damage from Wildfire Ordinance. The CWP Ordinance is being drafted in response to the February 11, 2020 motion by the Los Angeles County Board of Supervisors. The CWP Ordinance will amend the Los Angeles County Code Title 21 (Subdivisions Code) and Title 22 (Planning and Zoning Code) to address adequate evacuation egress during wildfire events, to improve public safety, and to reduce risks to development located within Very High Fire Hazard Severity Zones (VHFSHSZ)[2]. We note that this motion was made over 5 years ago, but the ordinance has still not been enacted. And yet the County continues to approve projects such as the Lyons project without these basic public safety measures in place.

We ask that he County complete Assembly Bill's 747 road analysis for the area around this project before the EIR is certified.

Response to Comment 4-1

The comment above references Assembly Bill 747 (2019) that is applicable to be implemented on County level. Thus, it is not applicable to Project-level analyses, and the evacuation analyses prepared for the EIR does not assume or require implementation of Assembly Bill 747. Thus, it is not required that the Project's EIR be certified prior to completion of said Assembly Bill.

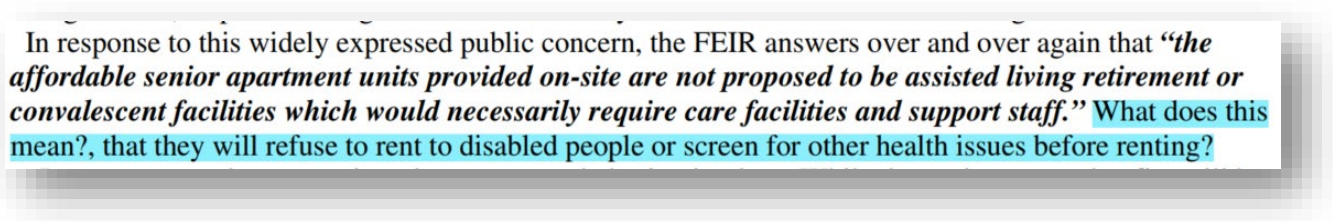

Comment 4-2

We note that the evacuation plan does not discuss how seniors with potential mobility problems will be helped down stairs in a four-story building without electricity. Power safety shut offs regularly occur in this area in high winds, so power for lights and elevators may not be available in a fast-moving wildfire.

Response to Comment 4-2

Like any part of the population that needs assistance, there are resources to assist mobility-impaired residents in the event of an emergency. Mitigation Measure 4.20-1 requires that at least once a year, information shall be provided to the residents in an email and mailer on how to notify the County Office of Emergency Management and Health and Human Services of special needs and/or required accommodations (Accessible Alert LA County, CERT programs, or other) for transportation or other special services. The proposed Project includes two stairs that are designed in accordance with the applicable Building Code requirements to allow multiple points of egress in the event of an emergency, as well as an elevator. The senior living building will be fire-rated to withstand fire exposure for 60-minutes and will include a fire sprinkler system, as stated in detail in Topical Response-1 of Chapter 2, Response to Comments of the Final EIR. Finally, in accordance with MM-4.20-1, Wildfire Education Program, the Fire Safety Coordinator will be responsible for creating the senior housing carpool program and will be available to assist with procedures for evacuation and transportation during an emergency evacuation.

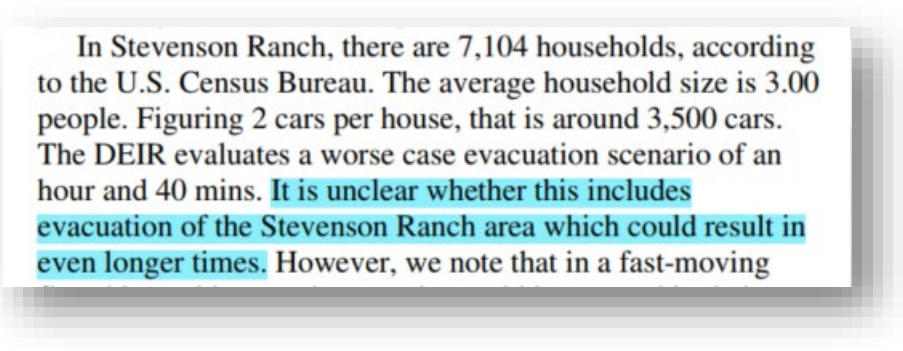

Comment 4-3

In response to this widely expressed public concern, the FEIR answers over and over again that ***"the affordable senior apartment units provided on-site are not proposed to be assisted living retirement or convalescent facilities which would necessarily require care facilities and support staff."*** What does this mean?, that they will refuse to rent to disabled people or screen for other health issues before renting?

Response to Comment 4-3

The Project would comply with all fair housing laws, which prohibit discrimination related to physical disabilities. The Final EIR merely clarifies that the proposed low-income senior housing is not a facility that specializes in assisted living for seniors or convalescent care.

Comment 4-4

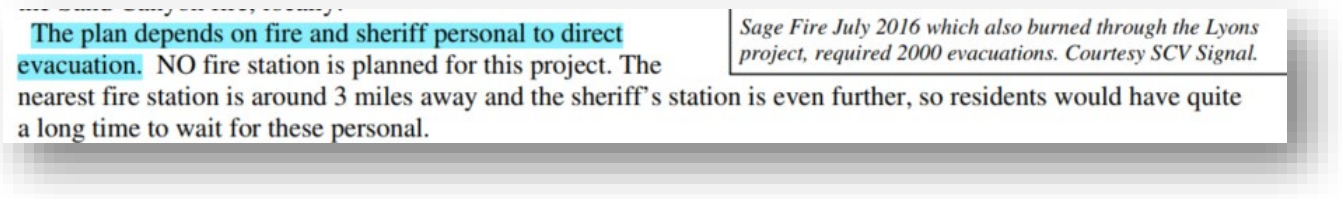

In Stevenson Ranch, there are 7,104 households, according to the U.S. Census Bureau. The average household size is 3.00 people. Figuring 2 cars per house, that is around 3,500 cars. The DEIR evaluates a worse case evacuation scenario of an hour and 40 mins. It is unclear whether this includes evacuation of the Stevenson Ranch area which could result in even longer times. However, we note that in a fast-moving

Response to Comment 4-4

As shown on Figure 4, Existing Land Uses and Proposed Project Evacuation Area in Attachment D to the Final EIR, the evacuation zone considered in the analysis does not include Stevenson Ranch. The evacuation study focused on areas likely to utilize the same evacuation routes as the proposed Project, and which lack viable alternative routes. Stevenson Ranch, located north of the Project site, has direct access to Stevenson Ranch Parkway/McBean Parkway, a four-lane major arterial. In the event of a fire evacuation, residents of Stevenson Ranch would most

likely use this roadway to reach the regional transportation network. In contrast, residents within the Project area would primarily rely on The Old Road and Lyons Avenue. Therefore, Project-generated traffic would more directly impact the zones analyzed in the study. Further, as stated in the Final EIR, Section 2.4.4, Project Wildfire Evacuation Modeling, the evacuation modeling makes an additional conservative assumption that both the STV-E109 and the STV-PICO evacuation zones would be evacuated simultaneously, resulting in a mass evacuation that does not account for phasing or evacuation management by emergency providers.

Comment 4-5

Sage Fire July 2016 which also burned through the Lyons project, required 2000 evacuations. Courtesy SCV Signal.

The plan depends on fire and sheriff personal to direct evacuation. NO fire station is planned for this project. The nearest fire station is around 3 miles away and the sheriff's station is even further, so residents would have quite a long time to wait for these personal.

Response to Comment 4-5

This comment is incorrect. As stated in the Final EIR, Section 2.4.4, Project Wildfire Evacuation Modeling, the evacuation modeling does not take into consideration a phased evacuation managed by emergency responders. The evacuation model evaluated all five evacuation scenarios under a mass evacuation of the study area; therefore, the reported evacuation times would decrease in a phased evacuation approach.

Response to Comment Letter 5

City of Santa Clarita
July 29, 2025

Comments that were not specifically addressed in Chapter 2, Response to Comments, of the Final EIR are highlighted in blue and responded to below.

Comment 5-1

A9-1 The list of study intersections should be expanded to include Calgrove Boulevard and the Old Road. Any signalization changes of City signals required by this project shall be paid for by the developer. Should traffic within the City increase beyond the traffic study's estimates the applicant shall be responsible for mitigation measures.

Response to Comment 5-1

The intersection of Calgrove Boulevard and The Old Road was included in the Project's Draft EIR, Appendix J, Transportation Impact Analysis. The Project is not expected to cause operational deficiencies at this intersection.

Comment 5-2

A9-2 As requested previously, the Final EIR should consider non-motorized connectivity to Towsley Canyon Park, specifically a connection from the intersection of The Old Road and Calgrove Boulevard to the Towsley Canyon Park entrance as part of the overall project. ADA improvements should be made at this intersection including ramps, sidewalk, pedestrian push buttons and crosswalks to provide connectivity. A southbound Class II bike lane terminates at this location. Improvements to accommodate the lane further southbound to Towsley Canyon should be considered as well as a northbound lane to Wiley Canyon as part of this project.

Response to Comment 5-2

ADA improvements at the intersection of The Old Road and Calgrove Boulevard are not a part of the proposed Project. This intersection is within County jurisdiction and improvements to this intersection have not been requested by the County.

Comment 5-3

Staff requests further details as to the proposed E-Bike program for the community. Particularly regarding where they will be allowed, if they can be geofenced and how the community proposes to regulate and maintain the vehicles.

Response to Comment 5-3

According to the County's Public Works' approval letter, the HOA would be responsible for ongoing maintenance and implementation of the program. Additionally, a total of fifteen (15) E-Bikes would be loaned to members of the HOA at no cost on a first-come, first-served basis. E-Bikes would be stored and checked out from the community recreation center. The E-Bikes will be for residents of the community for use in the area and will not be publicly accessible.

Comment 5-4

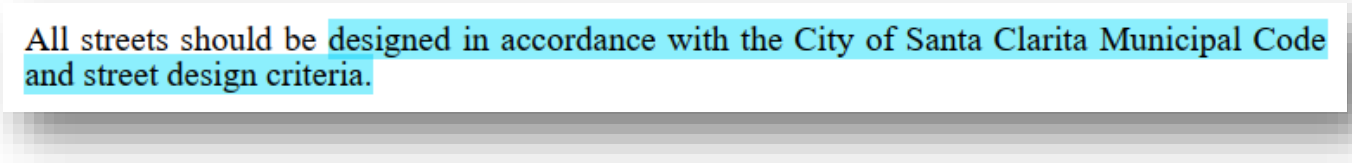

Staff asks that the traffic model include the Oak Ridge Industrial project at Oak Ridge and Newhall Ranch Road which includes 12 industrial/commercial lots on 20.8 acres.

Response to Comment 5-4

The cumulative project list was prepared in consultation with the County and the City of Santa Clarita. The Draft EIR includes a list of 50 Cumulative Projects in unincorporated Los Angeles County and in the City of Santa Clarita, which include the known projects that were determined to be applicable in accordance with coordination with the City and County, and as available at the time of the preparation of this Draft EIR. The list also includes Cumulative Projects within the Draft Transportation Impact Analysis prepared by Fehr and Peers, which was revised based on comments received from the City (included as Response to Comment A9 of the Final EIR).

Oak Ridge Drive and Newhall Ranch Road do not intersect. The "Oak Ridge Industrial Project." Instead, the Draft EIR includes Cumulative Project SC9, Santa Clarita Commerce Center, which is located north of the intersection of Oak Ridge Drive and Springbrook Avenue. This project was analyzed as an approved 430,000 square foot industrial project. According to the State Clearinghouse, this project (State Clearinghouse No. 2023050685) was proposed on a 22.3-acre site. Given this, the City's comment is likely referring to Santa Clarita Commerce Center, which was included in the Draft EIR's analysis. The Draft EIR's Transportation Impact Analysis does not include this cumulative project as it is outside of the boundaries of the County's VMT guidelines. No change to the environmental analysis contained in the Draft EIR is required.

Comment 5-5

All streets should be designed in accordance with the City of Santa Clarita Municipal Code and street design criteria.

Response to Comment 5-5

The Project's improvements to The Old Road and internal roadways within the Project site would be completed and are designed in compliance with Los Angeles County standards, which are applicable to the Project. City of Santa Clarita roadway standards are not applicable to the Project as the Project is not located within the City of Santa Clarita's jurisdiction.

Re: Proposed Housing Development Project at Lyons Canyon

To: commission@planning.lacounty.gov; comment@planning.lacounty.gov; eaguirre@planning.lacounty.gov; eaguirre@planning.lacounty.gov; dlouie@planning.lacounty.gov; emoon@planning.lacounty.gov; poconner@planning.lacounty.gov; mhastings@planning.lacounty.gov;

Cc: contact_us@counsel.lacounty.gov; fdavenport@ceo.lacounty.gov; clerk@rrcc.lacounty.gov

Dear Los Angeles County Regional Planning Commission,

The California Housing Defense Fund ("CalHDF") submits this letter to remind the County of its obligation to abide by all relevant state laws when evaluating the proposed 510-unit housing development project in Lyons Canyon, which includes 24 affordable for sale units and 47 affordable senior rental units. These laws include the Housing Accountability Act ("HAA") and the Density Bonus Law ("DBL").

The HAA provides the project legal protections. It requires approval of zoning and general plan compliant housing development projects unless findings can be made regarding specific, objective, written health and safety hazards. (Gov. Code, § 65589.5, subds. (d), (j).) The HAA also bars cities from imposing conditions on the approval of such projects that would render the project infeasible (*id*. at subd. (d)) or reduce the project's density (*id*. at subd. (j)) unless, again, such written findings are made. As a development with at least two-thirds of its area devoted to residential uses, the project falls within the HAA's ambit, and it complies with local zoning rules and the applicable general plan. Increased density, concessions, and waivers that a project is entitled to under the DBL (Gov. Code, § 65915) do not render the project noncompliant with the zoning code or general plan, for purposes of the HAA (Gov. Code, § 65589.5, subd. (j)(3)). The HAA's protections therefore apply, and the County may not reject the project except based on health and safety standards, as outlined above. Furthermore, if the County rejects the project or impairs its feasibility, it must conduct "a

thorough analysis of the economic, social, and environmental effects of the action." (*Id.* at subd. (b).)

CalHDF also writes to emphasize that the DBL offers the proposed development certain protections. The County must respect these protections. In addition to granting the increase in residential units allowed by the DBL, the County must not deny the project the proposed waivers and concessions for multi-family housing in a density-controlled development within the C-3-DP Zone and parking as a primary use in the A-2 Zone; reduced building separation on Lot No. 6; over height residential building height in the A-2 Zone; maximum retaining wall height of up to 17.5 feet within setback areas; over-height retaining walls with non-view-obscuring fences in both cut and fill conditions; and reduced rear yard setback for Lot Nos. 3 and 4. If the County wishes to deny requested waivers, Government Code section 65915, subdivision (e)(1) requires findings that the waivers would have a specific, adverse impact upon health or safety, and for which there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact. If the County wishes to deny requested concessions, Government Code section 65915, subdivision (d)(1) requires findings that the concessions would not result in identifiable and actual cost reductions, that the concessions would have a specific, adverse impact on public health or safety, or that the concessions are contrary to state or federal law. The County, if it makes any such findings, bears the burden of proof. (Gov. Code, § 65915, subd. (d)(4).) Additionally, the California Court of Appeal has ruled that when an applicant has requested one or more waivers and/or concessions pursuant to the DBL, the County "may not apply any development standard that would physically preclude construction of that project as designed, even if the building includes 'amenities' beyond the bare minimum of building components." (*Bankers Hill 150 v. City of San Diego* (2022) 74 Cal.App.5th 755, 775.)

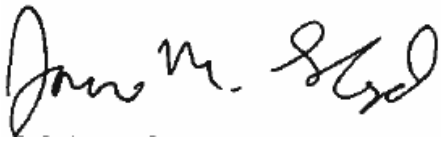

As you are well aware, California remains in the throes of a statewide crisis-level housing shortage. New housing such as this is a public benefit: by providing affordable housing, it will mitigate the state's homelessness crisis; it will augment the County's tax base; it will bring new customers to local businesses; and it will reduce displacement of existing residents by reducing competition for existing housing. It will also help cut down on transportation-related greenhouse gas emissions by providing housing in the Los Angeles urban area, as opposed to farther-flung regions in the state (and out of state). While no one project will solve the statewide housing crisis, the proposed development is a step in the right direction. CalHDF urges the County to approve it, consistent with its obligations under state law.

CalHDF is a 501(c)(3) non-profit corporation whose mission includes advocating for increased access to housing for Californians at all income levels, including low-income households. You may learn more about CalHDF at www.calhdf.org.

Sincerely,

Dylan Casey
CalHDF Executive Director

Letter Subject: Vote YES on The Trails at Lyons Canyon
Letter Body:

I am writing to express my strong support for The Trails at Lyons Canyon project. As a local resident, I believe this development will bring significant benefits to our community.

One of the most impressive aspects of this project is its commitment to fire safety. The development includes state-of-the-art fire protection measures, such as ignition-resistant building materials, interior fire sprinkler systems in all structures, and a well-maintained fuel modification zone that provides defensible space around the community. These measures significantly reduce the risk of wildfire spread both within the project site and to neighboring areas. In addition to these improvements, the project will provide a new water tank that enhances water pressure for neighboring homes and increases local water supply for fire protection.

The project incorporates perimeter landscaping with low-fuel, drought-tolerant plants that are designed to minimize fire ignition and spread. This proactive approach aligns with modern fire

safety codes and provides a model for how developments in fire-prone areas should be constructed.

One of the most commendable aspects of this project is its commitment to preserving open space. By dedicating 80% of the property as protected open space, The Trails at Lyons Canyon will ensure that 615 acres remain natural and undeveloped, providing a sanctuary for local wildlife and a place for residents to connect with nature.

Additionally, the project plans to connect to over 20 miles of adjacent hiking and nature trails, enhancing recreational opportunities for all residents. This integration promotes a healthy lifestyle and fosters a sense of community among trail users.

The inclusion of 510 new homes, with 71 units designated as affordable housing for very-low-income seniors and middle-income working families, addresses the pressing need for attainable housing in our area. This thoughtful approach ensures that our community remains inclusive and diverse, providing opportunities for individuals and families to live and thrive here.

For these reasons, I wholeheartedly support The Trails at Lyons Canyon project and urge the Planning Commission to approve it. This development represents a fire-safe, balanced, and forward-thinking approach to growth, benefiting both current and future residents.

Thank you for your time and consideration.

Letter Subject: Vote YES on The Trails at Lyons Canyon
Letter Body:

I am writing to express my strong support for The Trails at Lyons Canyon project. As a local resident, I believe this development will bring significant benefits to our community.

One of the most impressive aspects of this project is its commitment to fire safety. The development includes state-of-the-art fire protection measures, such as ignition-resistant building materials, interior fire sprinkler systems in all structures, and a well-maintained fuel modification zone that provides defensible space around the community. These measures significantly reduce the risk of wildfire spread both within the project site and to neighboring areas. In addition to these improvements, the project will provide a new water tank that enhances water pressure for neighboring homes and increases local water supply for fire protection.

The project incorporates perimeter landscaping with low-fuel, drought-tolerant plants that are designed to minimize fire ignition and spread. This proactive approach aligns with modern fire

safety codes and provides a model for how developments in fire-prone areas should be constructed.

One of the most commendable aspects of this project is its commitment to preserving open space. By dedicating 80% of the property as protected open space, The Trails at Lyons Canyon will ensure that 615 acres remain natural and undeveloped, providing a sanctuary for local wildlife and a place for residents to connect with nature.

Additionally, the project plans to connect to over 20 miles of adjacent hiking and nature trails, enhancing recreational opportunities for all residents. This integration promotes a healthy lifestyle and fosters a sense of community among trail users.

The inclusion of 510 new homes, with 71 units designated as affordable housing for very-low-income seniors and middle-income working families, addresses the pressing need for attainable housing in our area. This thoughtful approach ensures that our community remains inclusive and diverse, providing opportunities for individuals and families to live and thrive here.

For these reasons, I wholeheartedly support The Trails at Lyons Canyon project and urge the Planning Commission to approve it. This development represents a fire-safe, balanced, and forward-thinking approach to growth, benefiting both current and future residents.

Thank you for your time and consideration.

Letter Subject: Vote YES on The Trails at Lyons Canyon
Letter Body:

I am writing to express my strong support for The Trails at Lyons Canyon project. As a local resident, I believe this development will bring significant benefits to our community.

One of the most impressive aspects of this project is its commitment to fire safety. The development includes state-of-the-art fire protection measures, such as ignition-resistant building materials, interior fire sprinkler systems in all structures, and a well-maintained fuel modification zone that provides defensible space around the community. These measures significantly reduce the risk of wildfire spread both within the project site and to neighboring areas. In addition to these improvements, the project will provide a new water tank that enhances water pressure for neighboring homes and increases local water supply for fire protection.

The project incorporates perimeter landscaping with low-fuel, drought-tolerant plants that are designed to minimize fire ignition and spread. This proactive approach aligns with modern fire

safety codes and provides a model for how developments in fire-prone areas should be constructed.

One of the most commendable aspects of this project is its commitment to preserving open space. By dedicating 80% of the property as protected open space, The Trails at Lyons Canyon will ensure that 615 acres remain natural and undeveloped, providing a sanctuary for local wildlife and a place for residents to connect with nature.

Additionally, the project plans to connect to over 20 miles of adjacent hiking and nature trails, enhancing recreational opportunities for all residents. This integration promotes a healthy lifestyle and fosters a sense of community among trail users.

The inclusion of 510 new homes, with 71 units designated as affordable housing for very-low-income seniors and middle-income working families, addresses the pressing need for attainable housing in our area. This thoughtful approach ensures that our community remains inclusive and diverse, providing opportunities for individuals and families to live and thrive here.

For these reasons, I wholeheartedly support The Trails at Lyons Canyon project and urge the Planning Commission to approve it. This development represents a fire-safe, balanced, and forward-thinking approach to growth, benefiting both current and future residents.

Thank you for your time and consideration.

The project incorporates perimeter landscaping with low-fuel, drought-tolerant plants that are designed to minimize fire ignition and spread. This proactive approach aligns with modern fire

safety codes and provides a model for how developments in fire-prone areas should be constructed.

One of the most commendable aspects of this project is its commitment to preserving open space. By dedicating 80% of the property as protected open space, The Trails at Lyons Canyon will ensure that 615 acres remain natural and undeveloped, providing a sanctuary for local wildlife and a place for residents to connect with nature.

Additionally, the project plans to connect to over 20 miles of adjacent hiking and nature trails, enhancing recreational opportunities for all residents. This integration promotes a healthy lifestyle and fosters a sense of community among trail users.

The inclusion of 510 new homes, with 71 units designated as affordable housing for very-low-income seniors and middle-income working families, addresses the pressing need for attainable housing in our area. This thoughtful approach ensures that our community remains inclusive and diverse, providing opportunities for individuals and families to live and thrive here.

For these reasons, I wholeheartedly support The Trails at Lyons Canyon project and urge the Planning Commission to approve it. This development represents a fire-safe, balanced, and forward-thinking approach to growth, benefiting both current and future residents.

Thank you for your time and consideration.

Letter Body:

I am writing to express my strong support for The Trails at Lyons Canyon project. As a local resident, I believe this development will bring significant benefits to our community.

One of the most impressive aspects of this project is its commitment to fire safety. The development includes state-of-the-art fire protection measures, such as ignition-resistant building materials, interior fire sprinkler systems in all structures, and a well-maintained fuel modification zone that provides defensible space around the community. These measures significantly reduce the risk of wildfire spread both within the project site and to neighboring areas. In addition to these improvements, the project will provide a new water tank that enhances water pressure for neighboring homes and increases local water supply for fire protection.

The project incorporates perimeter landscaping with low-fuel, drought-tolerant plants that are designed to minimize fire ignition and spread. This proactive approach aligns with modern fire safety codes and provides a model for how developments in fire-prone areas should be constructed.

One of the most commendable aspects of this project is its commitment to preserving open space. From: Barbara Creme
To: Erica G. Aguirre
Subject: Objection to Lyons Ranch
Date: Tuesday, July 29, 2025 4:18:06 PM

CAUTION: External Email. Proceed Responsibly.

Ms. Aguirre,

As the subject field indicates, this letter is in objection to Lyons Ranch housing for reasons I'm sure with which you are already familiar: the high fire area, vulnerability of seniors in fire situations, lack of adequate evacuation, lack of fire station, etc.

Obviously, the primary concern is the issue of fire -- potential for fire, and the lack of safety in case of fire.

If the fire concerns are being full addressed, I would appreciate knowing that.

In the meantime, until I know the safety and other issues are resolved, I object to the Lyons project.

Thank you for your consideration of my concerns.

Barbara Creme
Stevenson Ranch Homeowner

From: David Rodgers
To: Erica G. Aguirre
Subject: RE: Project #PRJ2021-001195 Lyons; Trails at Lyons Project
Date: Wednesday, July 30, 2025 1:10:08 AM

CAUTION: External Email. Proceed Responsibly.

Dear Ms. Aguirre,

I am opposed to the current plan for the captioned project for the following reasons, at a minimum:

1. The project plan requires impacts to 312 SEA-protected trees, including complete removal of 265 trees. The remaining 47 trees may be destroyed as well. The 265 removals include 160 protected native oak trees, of which 14 are Heritage Oak Trees. All of these oak trees, especially the Heritage Oak Trees, are protected by the L.A. County Oak Tree Ordinance. Further, these oak trees are protected by California state law, entitled "California Oak Woodland Conservation Act." Thus it is a violation of County and State law to cut down these 160 oak trees. The project developer's proposal to plant 772 seedling or sapling trees to replace the 318 destroyed trees is hardly sufficient to replace the lost ecosystems and carbon dioxide sequestration functions of the 318 trees.

2. The project plan does not adequately address the high fire safety risk to residents, especially seniors, given the project is located in a Very High Severity Fire Hazard Zone. The wildfire mitigation plans proposed by the developer would not protect this project from massive, if not total, destruction in the types of fires which destroyed Pacific Palisades and Altadena neighborhoods in January 2025. We can expect to experience a combination of drought, heat and powerful winds more often in southern California as a result of climate change, and fire ignitions cannot be totally prevented especially as population densities increase.

3. As the population of the Santa Clarita Valley continues to grow, the air quality is becoming worse. We have more unhealthful air quality days than ever before. The developer needs to make certain every effort is made to incentivize clean energy use and electric vehicle adoption (i.e. rooftop solar, 220/240 volt outlets, EV charging stations), and to use public transportation.

For the above reasons, at a minimum, I respectfully request that this project be returned to the developer for modification of its plan in order to address my above concerns. To begin, I believe the project should be downsized substantially to help address my concerns. Thank you very much for your consideration.

Very truly yours,

David E. Rodgers

Subject: Submission of Community Petition & Evidence – Trails at Lyons Canyon (PRJ2021-001195)
Date: Tuesday, July 29, 2025 9:05:49 PM
Attachments: Trails_at_Lyons_Canyon_Community_Petition_and_Evidence_Michael_Ramos.pdf.pdf

---

CAUTION: External Email. Proceed Responsibly.

Dear Ms. Aguirre,

I am submitting additional evidence of public opposition to the proposed **Trails at Lyons Canyon** housing development (**PRJ2021-001195**).

Attached is a PDF titled
"Trails_at_Lyons_Canyon_Community_Petition_and_Evidence_Michael_Ramos.pdf", which contains:

- **585 digital petition signatures** from Change.org opposing the project.
- **116 in-person petition signatures** gathered near the **Towsley Trailhead** within the Santa Clarita Woodlands Park, in the same park system as Rivendale Park Open Space.
- **Photographs** documenting where and how the signatures were gathered, along with images of the impacted natural areas.

These signatures represent a strong and growing public opposition to the project from Santa Clarita residents, trail users, and the broader community. The community's concerns remain focused on preserving our open space, protecting native habitat, and maintaining the scenic and recreational character of this area.

Please confirm that this document will be included in the public record for the **July 30, 2025 Regional Planning Commission hearing**.

Thank you for your time and consideration.

Sincerely,
Michael Ramos

froinc3@gmail.com

Community Petition Opposing the Trails at Lyons Canyon Project
Project No.: PRJ2021-001195
Prepared for Submission to the Los Angeles County Department of Regional Planning
Regional Planning Commission Hearing – July 30, 2025

Prepared by:
Michael Ramos
26018 Franklin Lane
Stevenson Ranch, CA 91381
Phone: (805) 746-3938
Email: froinc3@gmail.com

Summary:
This document contains combined evidence of community opposition to the proposed **Trails at Lyons Canyon** housing development. It includes:

1. **Photographic documentation** of petition gathering near the **Towsley Trailhead**, located in the **Santa Clarita Woodlands Park** and within the same park system as the **Rivendale Park Open Space**. This location is directly adjacent to the proposed project area and frequently used by local hikers, mountain bikers, and families.
2. **Digital petition results** from Change.org, representing **585 online signatures** in opposition to the project.
    - Petition Link: https://www.change.org/p/help-save-towsley-canyon-reject-senior-housing-in-a-very-high-fire-hazard-severity-zone
3. **Physical petition signatures** collected in person at the Towsley Trailhead and surrounding community, totaling **116 additional signatures**.
4. **Combined total: 701 verified signatures** opposing the Trails at Lyons Canyon Project.

Purpose of Submission:
To provide a clear, consolidated record of public opposition to the Trails at Lyons Canyon Project, demonstrating significant concern from residents, trail users, and the broader community regarding the loss of open space, removal of heritage oak trees, degradation of wildlife habitat, and irreversible impacts to Santa Clarita's scenic and recreational resources.

Petition Opposing Lyons Ranch Project

This is a 500+ unit development located just north of Towsley Canyon in a Very High Fire Severity Zone. It includes a three-story senior housing facility. It will remove hundreds of protected trees in a significant ecological area and require massive grading. The below signed individuals are very concerned about putting seniors in a dangerous fire area and removing so many native trees. We believe there is a critical need for further understanding and consideration of the risks involved, including: a high fire risk (7 fires in the area in the past 10 years within 5 miles of the proposed development, 3 of which were significant) and inadequate fire mitigation measures being proposed, the destruction of the natural habitat including the removal of 334 SEA protected trees (22 of which are Heritage Oaks), the proposed Senior Housing not supporting many elderly residents evacuating safely in a crisis (there may be no electricity for elevators, the already severely congested traffic during the recent evacuations would only worsen, and public services to this area are expected to be limited).

Community Petition Opposing the Trails at Lyons Canyon Project
Project No.: PRJ2021-001195
Prepared for Submission to the Los Angeles County Department of Regional Planning
Regional Planning Commission Hearing – July 30, 2025

Prepared by:
Michael Ramos
26018 Franklin Lane
Stevenson Ranch, CA 91381
Phone: (805) 746-3938
Email: froinc3@gmail.com

Summary:
This document contains combined evidence of community opposition to the proposed **Trails at Lyons Canyon** housing development. It includes:

1. **Photographic documentation** of petition gathering near the **Towsley Trailhead**, located in the **Santa Clarita Woodlands Park** and within the same park system as the **Rivendale Park Open Space**. This location is directly adjacent to the proposed project area and frequently used by local hikers, mountain bikers, and families.
2. **Digital petition results** from Change.org, representing **585 online signatures** in opposition to the project.
    - Petition Link: https://www.change.org/p/help-save-towsley-canyon-reject-senior-housing-in-a-very-high-fire-hazard-severity-zone
3. **Physical petition signatures** collected in person at the Towsley Trailhead and surrounding community, totaling **116 additional signatures**.
4. **Combined total: 701 verified signatures** opposing the Trails at Lyons Canyon Project.
5. **Related correspondence and comment letters** previously submitted to the Department of Regional Planning, including my two formal comment letters (Comment Letter I61 and follow-up rebuttal), which document detailed environmental, aesthetic, and community concerns.

Purpose of Submission:
To provide a clear, consolidated record of public opposition to the Trails at Lyons Canyon Project, demonstrating significant concern from residents, trail users, and the broader community regarding the loss of open space, removal of heritage oak trees, degradation of wildlife habitat, and irreversible impacts to Santa Clarita's scenic and recreational resources.

Petition Opposing Lyons Ranch Project

This is a 500+ unit development located just north of Towsley Canyon in a Very High Fire Severity Zone. It includes a three-story senior housing facility. It will remove hundreds of protected trees in a significant ecological area and require massive grading. The below signed individuals are very concerned about putting seniors in a dangerous fire area and removing so many native trees. We believe there is a critical need for further understanding and consideration of the risks involved, including: a high fire risk (7 fires in the area in the past 10 years within 5 miles of the proposed development, 3 of which were significant) and inadequate fire mitigation measures being proposed, the destruction of the natural habitat including the removal of 334 SEA protected trees (22 of which are Heritage Oaks), the proposed Senior Housing not supporting many elderly residents evacuating safely in a crisis (there may be no electricity for elevators, the already severely congested traffic during the recent evacuations would only worsen, and public services to this area are expected to be limited).

We believe there is a critical need for further understanding and consideration of the risks involved, including: a high fire risk (7 fires in the area in the past 10 years within 5 miles of the proposed development, 3 of which were significant) and inadequate fire mitigation measures being proposed, the destruction of the natural habitat including the removal of 334 SEA protected trees (22 of which are Heritage Oaks), the proposed Senior Housing not supporting many elderly residents evacuating safely in a crisis (there may be no electricity for elevators, the already severely congested traffic during the recent evacuations would only worsen, and public services to this area are expected to be limited).

Petition Opposing Lyons Ranch Project

This is a 500+ unit development located just north of Towsley Canyon in a Very High Fire Severity Zone. It includes a three-story senior housing facility. It will remove hundreds of protected trees in a significant ecological area and require massive grading. The below signed individuals are very concerned about putting seniors in a dangerous fire area and removing so many native trees. We believe there is a critical need for further understanding and consideration of the risks involved, including: a high fire risk (7 fires in the area in the past 10 years within 5 miles of the proposed development, 3 of which were significant) and inadequate fire mitigation measures being proposed, the destruction of the natural habitat including the removal of 334 SEA protected trees (22 of which are Heritage Oaks), the proposed Senior Housing not supporting many elderly residents evacuating safely in a crisis (there may be no electricity for elevators, the already severely congested traffic during the recent evacuations would only worsen, and public services to this area are expected to be limited).

Subject: Opposition to the Trails at Lyons Canyon Project

Dear Ms. Aguirre,

I am writing to formally express my opposition to the proposed Trails at Lyons Canyon development. As a resident and frequent user of the Taylor Trail and surrounding open spaces in Santa Clarita, I am deeply concerned about the environmental and community impacts this project will bring.

The Taylor Trail and adjacent natural areas serve as vital recreational spaces for hikers, mountain bikers, and families who rely on them for outdoor activities, mental well-being, and connection to nature. This project, despite its proposed conservation efforts, will irreversibly alter the landscape, disrupt wildlife habitats, and diminish the open space that defines Santa Clarita's character. The construction of roads, high-density housing, and large buildings will introduce increased traffic, noise pollution, and ecological fragmentation—eroding the very qualities that make this area so special.

Santa Clarita has long been known for its commitment to preserving open spaces, and allowing this development to proceed would contradict that legacy. Urban encroachment continues to threaten the natural beauty of our region, and we must take a stand to protect what remains. Instead of supporting this project, I urge the Department of Regional Planning to explore alternative solutions that prioritize conservation and responsible land management.

I respectfully ask that you consider the voices of local residents who cherish this land and deny approval of the Trails at Lyons Canyon project. Thank you for your time and consideration.

See attached photos demonstrating the community's use of the trail and the natural habitat at risk.

Sincerely,
Michael Ramos

Subject: Follow-Up on Comment Letter I61 and Response in Final EIR for Trails at Lyons Canyon (PRJ2021-001195)

Dear Ms. Aguirre,

I am writing to follow up on my Comment Letter I61 and the responses provided in the July 2025 Final Environmental Impact Report (EIR) for the Trails at Lyons Canyon project.

While I appreciate that my comments were reviewed, the Final EIR does not fully address the irreversible damage this project will cause to the environment, the community, and the unique character of Santa Clarita's open spaces.

To illustrate what is at stake, I have included photos I personally took of oak trees, the hiking trail, native foliage, a dry creek bed, and a bobcat I encountered on the trail. These images capture the rich biodiversity and natural beauty that will be permanently lost if this development proceeds.

Key concerns:
Habitat Destruction & Wildlife Loss:
The proposed development will destroy vital wildlife habitat and native plant communities. The bobcat I photographed is just one of many species that depend on this corridor, and the removal of oak woodlands and native foliage will eliminate critical shelter and food sources.

Removal of Protected Oak Trees:
The Final EIR acknowledges over 250 protected oaks, including 17 heritage oaks, will be cut down. No mitigation can replace these centuries-old trees or the ecosystems they support.

Degradation of Recreational Trails:
While the EIR claims trails will remain, the reality is these trails will be irreversibly changed by adjacent dense housing, roads, and noise. The quiet, natural refuge that hikers and mountain bikers currently enjoy will be replaced with an urbanized corridor.

Significant Environmental Impacts:
The project will result in significant, unavoidable Vehicle Miles Traveled (VMT) impacts, contradicting Santa Clarita's goals for sustainability and clean air.

Community Opposition:
I have gathered 116 petition signatures from residents who oppose this project, all of whom value the open space for recreation, mental well-being, and wildlife protection.

Request:
Given the project's unavoidable environmental impacts, the destruction of irreplaceable wildlife habitat, and clear community opposition, I respectfully request the Department of Regional Planning and the Regional Planning Commission reject the Trails at Lyons Canyon project as proposed.

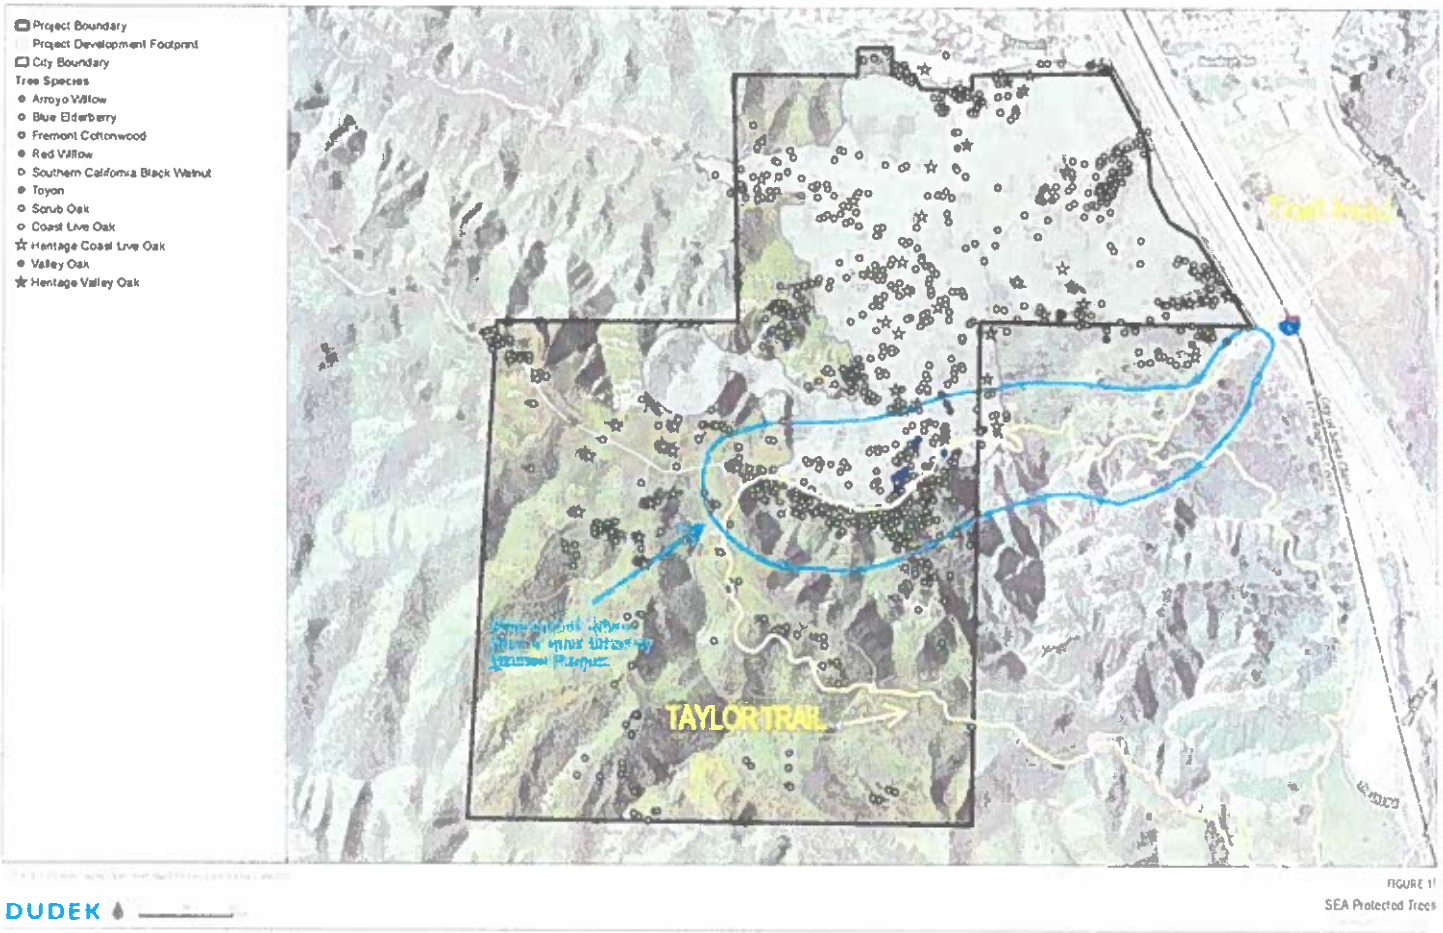

Santa Clarita should not sacrifice one of its last wild spaces for a development that will forever alter the landscape, wildlife, and community values we hold dear.

Thank you for your time and consideration.

Sincerely,
Michael Ramos
